Capital Adequacy under the Act on the Supervision of Financial and Insurance Conglomerates

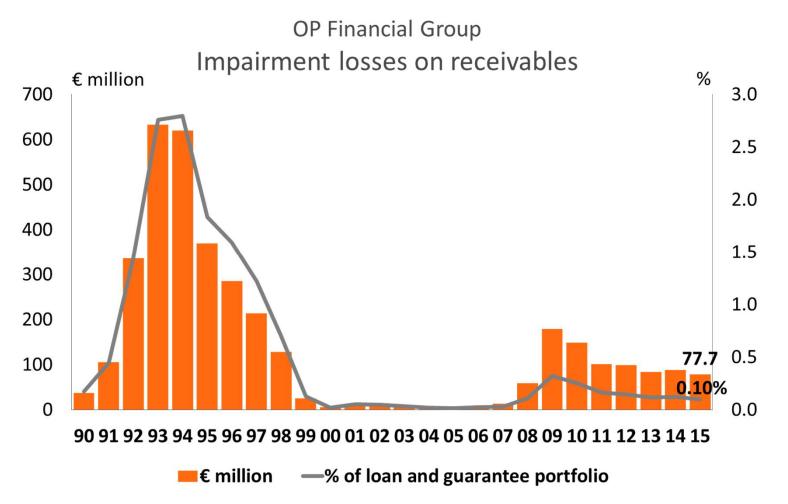

Statutory minimum requirement 100%, whereas OP's minimum target 160%

- In H1/2016, capital adequacy buffer was
 - increased by earnings
 - decreased by 22 pps by 2% capital conservation buffer of the Other Systemically Important Institution (O-SII) adopted at the beginning of 2016 and a decline in insurance business valuation differences
- 2% O-SII buffer increased the consolidated capital adequacy requirement from 10.5% to 12.5%, calculated as percentage of RWA
- Since the beginning of 2016, insurance-sector solvency has been calculated in compliance with Solvency II and the FICO capital adequacy figures since then have been presented in view of the transitional provisions
- Fin-FSA decided on 14 June 2016 to take measures to introduce a credit institution-specific minimum level of 10% for the average risk weight on housing loans of credit institutions that have adopted the IRBA. The minimum level would come into force on 1 July 2017 at the latest. Minimum RW of 10% on housing loans would lower OP's FICO capital adequacy by 7 pps.
