OP-Russia Fund, A-share class (ISIN: FI0008807094)
This fund is managed by OP Fund Management Company Ltd, which is part of the OP Group.

Objectives and Investment Policy

OP-Russia (Fund) is an equity fund which mainly invests its assets in the Russian equity market. The Fund may also invest in non-Russian companies for which Russia represents a key market area, according to the Fund Management Company's assessment. A maximum of a quarter of the Fund's value may be invested in equity markets of other former Soviet countries.

The Fund mainly invests directly in equities. The Fund may use derivative instruments in order to hedge against adverse market movements, to replace direct investments and to otherwise promote effective portfolio management. The Fund diversifies its equity investments across various companies. The Fund typically invests in equities of about 30–50 companies but this number may vary depending on the portfolio manager's view.

The Fund seeks to outperform its benchmark index in the long term. The Fund's benchmark index is MSCI Russia 10–40 TR Net. The Fund may take high active risk and the investment manager may depart significantly from the composition, weights and risk level of the benchmark index. Detailed figures regarding active risk can be found in OP Fund Management Company’s Fund Prospectus.

The Fund's portfolio manager makes investment decisions on the basis of the prevailing market view at the time. The investment decisions particularly emphasise weightings between different sectors and the portfolio manager’s view of individual companies.

The Fund uses a relative Value at Risk (VaR) analysis to monitor total risk. The Fund’s VaR may not be more than double the benchmark portfolio’s VaR. More information on VaR calculation can be found in OP Fund Management Company’s fund prospectus.

Any income received from the investments of the fund is reinvested in the fund.

Recommendation: This fund may not be appropriate for investors who plan to withdraw their money within 9 years.

Shares in the mutual fund can be purchased, sold or changed each banking day. If the execution order is received by 16:00:00, the order is executed to the value of the order date.

Risk and Reward Profile

<table>
<thead>
<tr>

</tbody>
</table>

The synthetic risk and reward indicator (SRRI) describes the risk of NAV fluctuation of units in the fund based on the actual fluctuation over the five preceding years. The indicator places the fund in category 7, which means that there is a very high risk of NAV fluctuation associated with the fund unit. It should be noted that even the lowest risk category of 1 does not mean a risk-free investment.

Historical data, such as those used in the calculation of the synthetic risk-reward indicator, do not necessarily give a reliable view of the future, and therefore the risk category of the fund may also change.

The key risks associated with the NAV performance of the Fund are emerging market risk, equity market risk, currency risk and political risks. The fund invests in emerging equity markets and therefore its NAV may fluctuate significantly based on market conditions, and its risk level is generally higher compared to funds investing in developed markets.

The fund invests its assets in equity markets outside the euro area and therefore the fund is subject to risk arising from negative foreign exchange fluctuations. The fund’s investments are primarily made in the Russian equity markets, whose performance may deviate from the overall performance of the equity markets. Before making an investment, the investor must also consider the special characteristics of emerging markets.
Charges for this Fund

Fees paid by investors are used to cover the fund’s operating costs, such as marketing and distribution costs. These costs reduce the possible return on the investment.

One-off charges taken before or after you invest

<table>
<thead>
<tr>
