Investment policy

OP-Inflation-Linked Bond Fund is a long-term fixed income fund investing its funds primarily in bonds issued by EEA and OECD member states and other public sector entities. The fund seeks to exceed the real yield of the governments bonds of investee countries. This yield means the difference between the bonds' nominal interest and the inflation rate. The Fund invests primarily in countries such as Australia, Sweden, Germany, Canada, France, New Zealand, Great Britain and United States. The fund's investments are primarily made through direct bond investments, but the fund may also use derivatives to hedge against market fluctuations and to replace direct investments. Typically the fund invests its assets in issues of about 20-40 companies, but this number may vary reflecting the views taken by the portfolio manager. The Fund seeks to hedge the fx risk related to other than euro-denominated investments. The modified duration of the fund, a measure of its interest rate sensitivity, is typically 7-11. This indicates the negative impact on the value of the fund in terms of percentages, if the interest rate level rises by one percentage point. As the level of interest rates decreases, the value of the fund increases accordingly. The issuers must have long-term ratings of at least Moody's A or S&P A. The Fund seeks to hedge any foreign exchange risk related to non-euro investments. The portfolio manager makes investment decisions based his prevailing view on the market. Key issues in the context of the fund's investment decisions include the analysis of the inflation view of the portfolio management relative to the market's inflation expectation and the adjustment of the fund's portfolio to this.

Portfolio manager

Lauri Laaksonen

Responsibility

Responsible investing

The fund follows [OP Asset Management's principles for responsible investment](#). The consideration of responsibility in the investment analysis and decision making provides additional information in addition to the traditional financial and market information. The significant aspects of responsibility can in the long run affect the financial success of the investment objects and thus the return.

Exclusion

The fund excludes from its active, direct investments manufacturers of controversial weapons, mining companies that produce coal, electricity companies that use charcoal and companies that have violated international standards, and which have not been susceptible to impact. [The list of excluded investment items](#) is public.

Active ownership

OP's funds participate in domestic and foreign general meetings in accordance with [OP Fund Management Co's Ownership Policy](#), which takes responsibility into account. All in all, OP's funds participate annually in more than one thousand general meetings. OP Funds utilize the Annual General Meetings Institutional Shareholder Services Annual General Meeting analysis.

Violation of international standards

International standards, such as the UN Global Compact, set the minimum level of responsible business operations. OP Asset Management affects through OP funds that make active, direct investments such companies that are considered to have violated international standards. The goal is to get companies that have violated the standards to change their business and start to comply with the international standards in their business. We use the company Sustainalytics as a service provider to identify violations of international standards.

Thematic impact

OP Asset Management also affects companies through various themes of responsibility, such as issues related to climate change.

Read more about the OP Funds' practical ownership influence in [the overview of responsible investment](#) that is published twice a year.

ESG analysis

ESG-rating

-

Total ESG score

-

Environment (E)

-

Social (S)

-

Governance (G)

-

The ESG score indicates how well the portfolio's target companies take into account risks and opportunities related to the environment, social aspects and good governance in relation to their industry. The score scale is 0-10. After that, the score is divided into 7 classes. The higher the score, the better the portfolio companies have prepared for the risks and opportunities associated with ESG.

Companies' ESG classification

AAA
AA
A
BBB
BB
B
CCC

Carbon intensity

-

greenhouse gas emissions in tonnes / turnover (\$M)

Coverage

-

The portfolio's carbon intensity is the weighted average of the portfolio companies' carbon dioxide intensity. The carbon footprint takes into account companies' greenhouse gas emissions in tonnes at level 1 and level 2 in relation to the company's turnover (million dollars).

Positive environmental impact

-

Renewable energy

-

Energy efficiency

-

Environmentally friendly construction

-

Sustainable use of water resources

-

Prevention of pollution

-

The portfolio's positive environmental impact examines how the portfolio companies' products and services have an impact on the environment. The number describes the proportion of products and services with a positive environmental impact on portfolio companies' turnover.

The portfolio's ESG analysis in relation to reference portfolios

	ESG	Carbon intensity	Positive environmental impact
Portfolio	-	-	-
World	5,9 	178,2 	3,6 
Europe	7,3 	147,4 	3,3 
Finland	7,3 	329,5 	8,2 

AAA = excellent, AA = very good, A = good, BBB = average, BB = satisfied, B = weak, CCC = very weak

The purpose of the monthly report is to provide its readers with information on the funds and their performance. Information provided in the report is no investment advice and no investment decisions should be made based on such information. The Key Investor Information Document for investors and the fund prospectus as well as the fund's annual report and half-yearly report are the documents that investors should read before making any subscription for fund units.
