## Investment policy

OP-America Index Fund is a passive index fund whose assets are invested in accordance with the MSCI North America ESG Universal Net Index in equities of the largest listed companies in North America. This means that the assets of the fund are distributed in the countries and companies constituting the benchmark index in the same proportions as in the benchmark index. Since the fund strives to replicate the performance of the benchmark index as closely as possible, it will only maintain a small cash position to pay for redemptions. In order to reduce securities transactions and costs resulting from redemptions and subscriptions, the fund may use derivatives in its portfolio management to a limited extent. Since the assets of the fund are invested in shares of the largest companies by market capitalisation, its investments may be concentrated to a significant extent in certain sectors, such as information technology, financials and energy. Changes are made in the portfolio of the fund primarily only in connection with the annual index revisions, which is why the trading expenses of the fund are relatively low.

The Fund promotes environmental and social characteristics and, to ensure it, uses environmental, social and governance (ESG) analysis and excludes certain investments. For more information about the ESG methods used, see the fund prospectus. The “do no significant harm” principle applies only to those investments underlying the fund that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this fund do not take into account the EU criteria for environmentally sustainable economic activities.

## ESG-analysis

ESG-rating	<b>A</b>	Carbon intensity	149.1	Green revenues	5.5 %
Total ESG score	7.0	greenhouse gas emissions in tonnes / turnover (\$M)		Renewable energy	0.6 %
Environment (E)	6.9	Coverage	100.0 %	Energy efficiency	4.4 %
Social (S)	5.3			Environmentally friendly construction	0.2 %
Governance (G)	5.7			Sustainable use of water resources	0.1 %
				Prevention of pollution	0.2 %

The ESG score indicates how well the portfolio's target companies take into account risks and opportunities related to the environment, social aspects and good governance in relation to their industry. The score scale is 0-10. After that, the score is divided into 7 classes. The higher the score, the better the portfolio companies have prepared for the risks and opportunities associated with ESG.

The portfolio's carbon intensity is the weighted average of the portfolio companies' carbon dioxide intensity. The carbon footprint takes into account companies' greenhouse gas emissions in tonnes at level 1 and level 2 in relation to the company's turnover (million dollars).

The portfolio's green revenues examines how the portfolio companies' products and services have an impact on the environment. The number describes the proportion of products and services with a positive environmental impact on portfolio companies' turnover.
